

Photo Etch Launches 3D RP Program

Using technology from Z Corp., Photo Etch has launched a new rapid proto-typing program, to offer three-dimensional (3D) color prototypes that can be used for concept visualization, design review, mock-ups for form and fit testing, as well as patterns for casting

applications. This latest prototyping technology is said to reduce the industry's traditional three-week turn-around time to an average of two days and reduce costs by as much as 80%. John Clapper is the sales representative for Canada (photo-etch.com).
